5.0 Interface Specifications

1.0 General Description

The VT8-E Alpha-numeric, Graphic video display terminal is a PDP8/E,M,F peripheral. It provides high speed, low cost video presentation of alpha-numeric or graphic data. It also provides keyboard data input to the processor and driving capability for an optional hard copy device. The VT8-E consists of the terminal (keyboard, display, housing and cable) with the associated control logic, and a parallel printer interface.

The display control logic supplies video, audio (beep), and sync pulses to the display monitor, while constantly refreshing from a data buffer in PDP8/E,M,F memory via single cycle data breaks. The keyboard control transfers parallel 8-bit ASCII code from the keyboard to the AC of the processor. The printer control transfers parallel 7-bit ASCII code from the AC to an optional printer (LS8-E or LA30A-PA).

The VT8-E can display 20 lines of alpha-numeric information. Sixty-four normal size characters or 32 enlarged characters can be displayed per line (jumper selectable). The VT8-E is also capable of displaying graphic information on a 189 x 200 dot matrix. Alpha and graphic display modes are program selectable. A line frequency (50 Hz or 60 Hz) real time clock is available to the programmer in the form of interrupts or a skip flag.

2.0 System Specifications

2.1 Basic System Components

1 - Video terminal (keyboard, display, housing) 7009044
1 - I/O cable 7009042
3 - Control modules M8336, M8337, M8335

2.2 Physical Specifications

2.2.1 Video terminal

Height: 12"
Width: 19"
Depth: 30"
Weight: 38 lbs.
Shipping Weight: 53 lbs.

2.2.2 I/O cable - Standard length - 15'
Optional length - 50'
(No other lengths available)

2.2.3 Control modules - Three quad (10½" x 8¼") modules which occupy adjacent slots in the OMNIBUS.

2.3 Power Requirements

2.3.1 Video terminal

Operation is possible under one of four power combinations:

7009044-1	100 to 130 VAC, 60 Hz.
7009044-2	200 to 260 VAC, 60 Hz.
7009044-1	100 to 130 VAC, 50 Hz.
7009044-2	200 to 260 VAC, 50 Hz.

Frequency tolerance: ±0.5%
Power consumption: 55 watt at 115 VAC
65 watt at 230 VAC

Power cord is terminated by a standard 3-prong, male, wall-type plug.

115V	DEC#	IA 7008502-9	7009044-1
230V	DEC#	IA 7008432-9	7009044-2

The slide switch on the monitor must be set in the appropriate 115/230 Volt position.

2.3.2 Control modules

+ 5.0V	3.7	Amps
-15 V	.130	Amps
+15 V	.082	Amps

2.4 Environmental Specifications

2.4.1 Video terminal

Operating temperature: 5°C to 43°C (41°F to 110°F)
Storage temperature: -10°C to 60°C (15°F to 140°F)
Humidity (non-condensing) 10 to 95%

2.4.2 Control modules

Operating temperature: 0°C to 55°C (32°F to 130°F)
Humidity (non-condensing): 10 to 95%

2.5 Performance Specification

2.5.1 Display - Alphanumeric Mode
Screen size: 10 1/8" W x 7 5/8" H
Characters per line: 64 normal or 32 enlarged (jumper selectable)
Number of lines: 20
Number of characters displayable: 1280 - Normal
640 - Enlarged
Display area: 8" W x 6¼" H - Enlarged
8" W x 4¼" H - Normal
Character size: .093" W x .150" H - Normal
.185" W x .220" H - Enlarged
Character spacing horiz.: 40% character width
.037" - Normal
.074" - Enlarged
Character spacing vert.: 43% character height
.064" - Normal
.094" - Enlarged
Characters per inch horiz.: 8 ch/in - Normal
4 ch/in - Enlarged
Characters per inch vert.: 4½ ch/in - Normal
3 ch/in - Enlarged
Deflection type: Magnetic
Deflection method: Raster scan
Character generation method: 5 x 7 dot matrix
Display refresh rate: 60 Hz or 50 Hz corresponding to AC supplied.
Geometry distortions: Less than ±1/8" over a centered 8" x 6¼" rectangle.
Phosphor type: P4 (white)

2.5.2 Display-Graphic Mode

Screen size: Same
Display area: 6.95" W x 6¼" H if adjusted for enlarged character.
6.95" W x 4¼" H if adjusted for normal character.
Display format: 189 dot W x 200 dot H dot matrix
Deflection type: Same
Deflection method: Same
Display refresh rate: Same
Phosphor type: Same

2.5.3 Blemishes

The glass and plastic filter in front of the CRT shall have no more than six defects including scratches of no greater than 0.1 inches wide within a centered 8" x 6¼" area.

2.5.4 VT8-E Transmit Codes

ASCII codes generated by the VT8-E keyboard are listed in Tables I, II, III and IV. Tables I & II indicate which key combinations generate a desired code. Tables III & IV indicates which code is generated for a given key combination.

With an internal select switch on the keyboard, the keyboard can be set to generate codes according to Tables I & III (upper and lower case codes) or according to Table II & IV (upper case codes only). The VT8-E, however, is capable of displaying only upper case characters.

2.5.5 VT8-E Receive Codes

Table V lists the character displayed for a given ASCII code.

2.5.6 Character Font

Figure 1 shows the character Font for the 64 displayable characters.

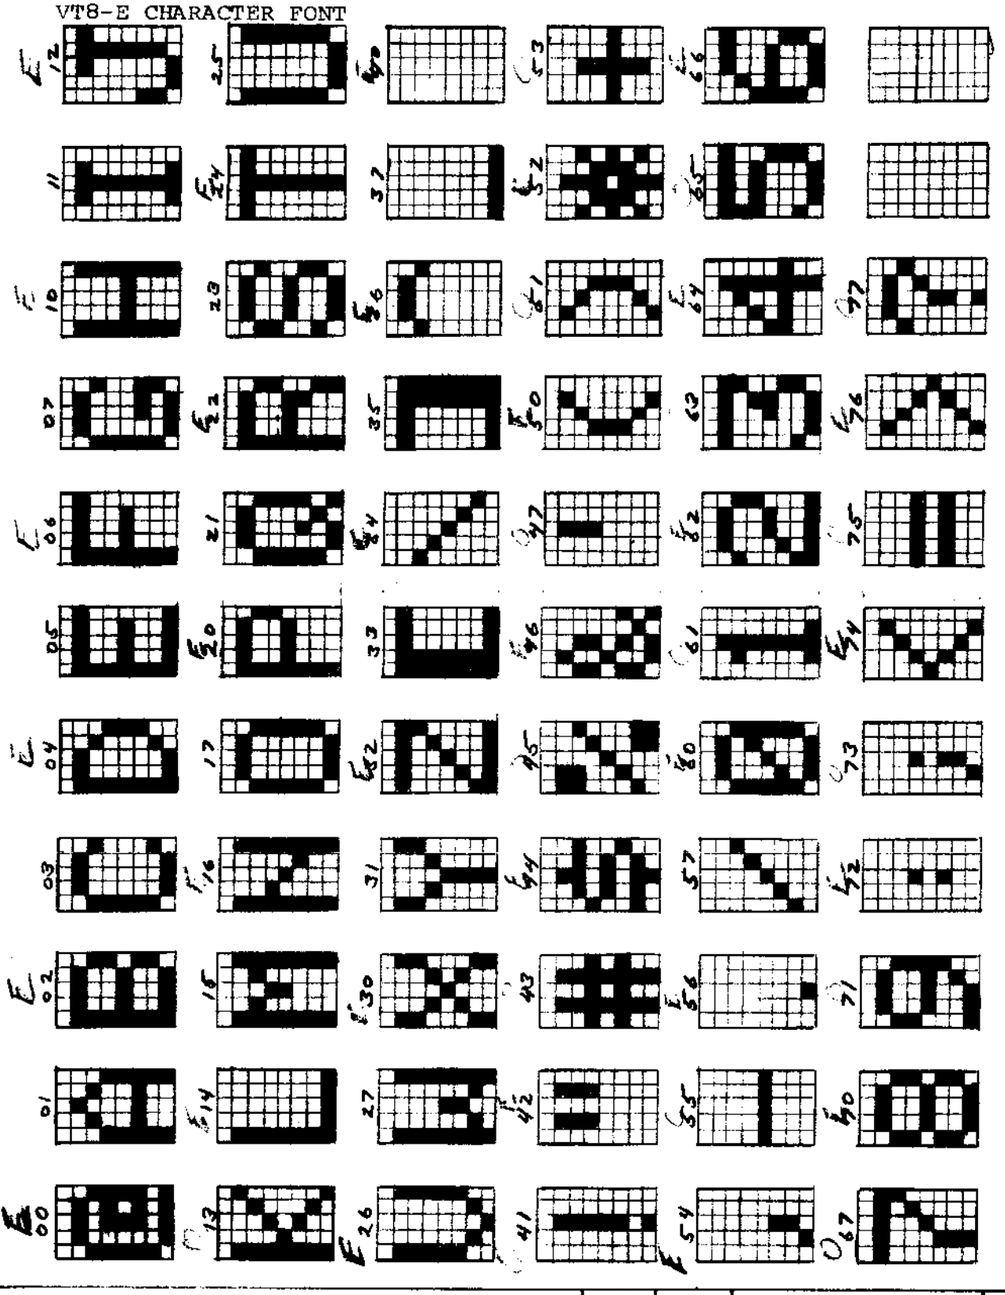
Figure 1
VT8-E CHARACTER FONT



2.5.7 Buffer Size

A full screen alpha-numeric display requires 1280_{10} = 2400_8 core locations for 64 characters per line. 640_{10} = 1200_8 core locations for 32 characters per line. Graphic mode displays 3200_{10} = 6200_8 words from core.

2.5.8 Processor Loading - each VT8-E

Alpha numeric, 64 characters per line full screen display uses approximately 9% processor time. Alpha numeric, 32 characters per line, full screen display uses approximately 4.5% of processor time. Graphic display uses approximately 25% of processor time.

2.6 Variations

The VT8-E is available in the following eight variations.

VT8-EA 64 normal characters per line, 60 HZ, 115V

VT8-EB 64 normal characters per line, 60 HZ, 230V

VT8-EC 64 normal characters per line, 50 HZ, 115V

VT8-ED 64 normal characters per line, 50 HZ, 230V

VT8-EE 32 enlarged characters per line, 60 HZ, 115V

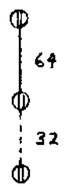
VT8-EF 32 enlarged characters per line, 60 HZ, 230V

VT8-EH 32 enlarged characters per line, 50 HZ, 115v

VT8-EJ 32 enalarged characters per line, 50 HZ, 230V

Control modules are manufactured in the 64 character, 60 Hz configuration. Jumpers on the M8336, M8337 allow the control to be changed to any of the other three variations. The video terminal power line differs between the 50 Hz and 60 Hz configurations.

On the M8336 there are four sets of jumpers, which together select 64 or 32 character operation. A jumper set looks like this



or this

If all 64/32 jumper sets are set in the 64 position as shown above, the VT8-E will display normal size characters. There is also one 64/32 jumper set on the M8337 module.

50 Hz or 60 Hz operation is selected by two sets of jumpers on the M8336.

Jumper set locations and jumper positions are shown on the cover sheets and physical of the M8336 and M8337.

Priority Selection

The VT8-E can be operated on any of the three lowest priorities 9, 10, 11. Priority is selected by jumpers. On the M8337 a jumper in location W1, W2, or W3 corresponds to priorities 9, 10, and 11. On the M8335 there are four possible jumper positions F10, F10', F9, F9'. These should be arrainged as indicated by the table below. Care must be taken to select the same priorities for both modules.

Priority	M8337 jumper inserted	M8335 jumpers
9	W1	F9 F10
10	W2	F9' F10
11	W3	F9' F10'

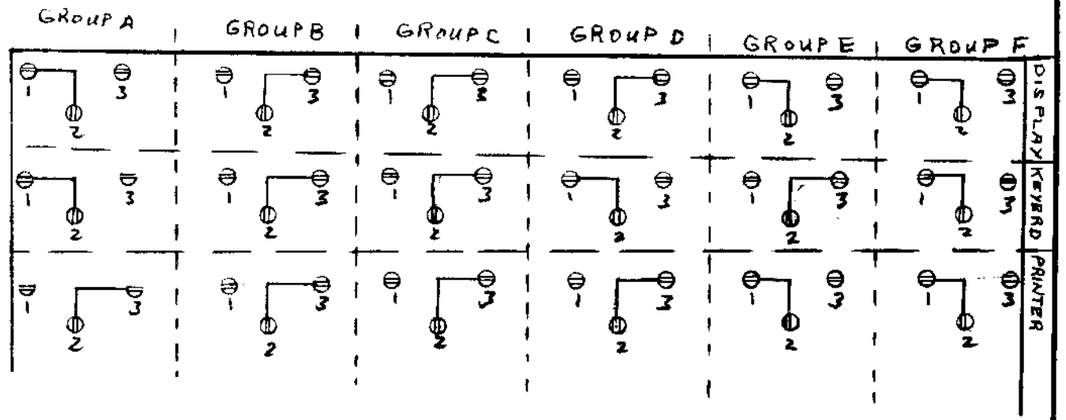
4.0 Programming

4.1 Device codes are originally set to 05 for the display, 03 for the keyboard, and 04 for the printer. However, split lugs and jumpers allow selection of any device code between 00 and 77 for the display, keyboard and printer. The device code selection jumpers are on the M8335. They are arranged as shown below. The device codes indicated are the standard 05, 03, and 04.



Jumper positions for all 64 device codes are listed in the following table. This table indicates which split lugs are to be connected in each of the six groups (A-F) for any desired device code. Each of the three devices has a row of split lug groups. The table is used for all three devices. Care must be taken that the row of split lugs altered is for the correct device. Refer to the cover sheet for the M8335 for split lug locations.

4.2 Display Instruction Set

Mnemonic	Code	Function
DPLA	6050	Load starting Address register with the contents of AC 0-11 and clear the AC. (AC) ⟶ SAR 0 ⟶ AC
DPGO	6051	Load the extended starting address register with the contents of AC 6-8 and GO in Alpha or Graphic mode, with real time clock interrupt enabled or disabled as specified by the contents of AC 10, 11. AC 10 AC 11 Ø Ø Alpha, interupt disabled Ø 1 Alpha, interrupt enabled 1 Ø Graphic, interrupt disabled 1 1 Graphic, interrupt enabled Clear the AC (AC 6-8) ⟶ XSAR GO 0 ⟶ AC
DPSM	6052	Stop the display. Inhibit video and device initiated data breaks. Enter Maintenance mode and if AC11 = 1 Load extended starting address register with the contents of AC 6-8.

		AC11 = Ø Transfer contents of starting address registers to the address counters. Prepare for a maintenance break. Ø ⟶ AC
DPMB	6053	Maintenance instruction. Perform one, one-cycle data break. The contents of the location specified by the address counter is transferred to the data buffer, and the address counter is incremented by one.
DPMD	6054	Maintenance instruction. Jam transfer the output of the data buffer to the AC. (Data Buffer) ⟶ AC
DPMS	6055	Maintenance instruction. Read the contents of the extended address counter into AC 6-8 and the state of the sense switch into AC Ø. (XAC) ⟶ AC 6-8 Sense Sw ⟶ AC Ø
DPCL	6056	Skip next sequential instruction if real time clock flag is set and clear the flag.
DPBL	6057	Generate a half second audible tone for use as a BELL.

4.3 Keyboard Instruction Set

Mnemonic	Code	Function
DKCF	6030	Clear keyboard flag.
DKSK	6031	SKip next sequential instruction if keyboard flag is set.
DKCC	6032	Clear keyboard flag and clear the AC.
	6033	Not used.
DKOB	6034	Logically OR the contents of the keyboard buffer with AC 5-11 and deposit in AC 5-11. Transfer a 1 to AC 4. AC 0-3 remains unchanged. (Key Buf) 'OR' AC 5-11 ⟶ AC 5-11 1 ⟶ AC 4 (AC 0-3) ⟶ AC 0-3
DKIN	6035	Enable keyboard-printer interrupt if AC 11 = 1. Disable if AC 11 = Ø.
DKRB	6036	Read keyboard buffer. Jam transfer the contents of keyboard buffer to AC 5-11. Set AC 4. Clear AC Ø-3. Clear keyboard flag.

4.4 Printer Instruction Set

Mnemonic	Code	Function
PNSF	6040	Set printer flag.
PNSK	6041	SKip next sequential instruction if print done flag is set.
PNCF	6042	Clear printer flag.
	6043	Not used.
PNLP	6044	Load printer buffer from AC 5-11 and print . [redacted]C.
PNSI	6045	Skip if about to interrupt. Skip if interrupt is enabled and either the keyboard flag or print done flag is set.
PNPC	6046	Load printer buffer from AC 5-11. Clear printer done flag and print. [redacted]C.

4.5 Maintenance Features

The maintenance instructions enable the programmer to verify the correct operation of the extended starting address register, extended address counter, sense switch, data break control, data buffer, starting address register, and address counter. The VT8-E diagnostics MAINDEC-08-DAVTA-A-PB and MAINDEC-08-DHVTB-A-PB) exercise the VT8-E in all display modes and aid in troubleshooting.

Description of Maintenance Instructions:

DPSM This instruction stops the display and sets maintenance mode by blanking the screen, inhibiting display initiated data breaks, inhibiting clocking of data buffer and locking the data buffer into the load state. During maintenance mode, the programmer can force a data break at any address thus shifting known data

into the data buffer, using instruction DPMB. As the data is shifted out of the buffer (31 or 63 shifts after it is shifted in) the data can be verified via instruction DPMD.

DPSM prepares for a single one-cycle data break by

1) Loading extended starting address register with the contents of AC 6-8 if AC Ø = 1.

2) Transferring the contents of the starting address registers to the address counters if AC Ø = Ø. DPSM clears the AC.

DPMB This instruction initiates a single one-cycle data break. One data word is transferred from the address specified by the address counter to the data buffer. This shifts the previous contents of the data buffer one position closer to the data buffer output. The DPMB also causes the address counter to be incremented. This instruction is inhibited unless in maintenance mode.

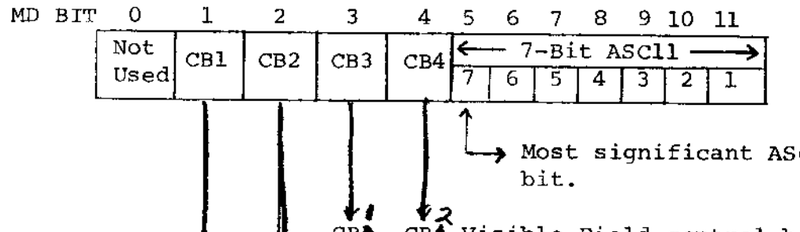
DPMD This instruction reads the output of the data buffer into the AC.

DPMS This instruction reads the contents of the extended address counter into AC 6-8 and the state of the sense switch into AC Ø.
Sense ON AC Ø = 1
Sense OFF AC Ø = Ø
The sense switch is a rocker switch located below the power ON/OFF switch on the auxiliary keyboard.

Maintenance mode is always entered by DPSM and can be left only by DPGO. DPSM also doubles as STOP DISPLAY.

4.6 Data Format

4.6.1 Display, Alpha-numeric Data



CB3	CB4		
Ø	Ø	NOP	If in visible field, display character in bits 5-11 according to CB3, CB4.
Ø	1	EBF	End blank field. Enable video starting with this character.
1	Ø	BBF	Begin blank field. Disable video for this character and those following. Blank field can be terminated by EBF control code.
1	1	EOS	End of screen. The previous character is the last to appear on the screen. Video and data breaks are inhibited until the next vertical retrace. This allows abreviated display buffers when it is not desired to use the entire screen. This saves core buffer space & reduces processor loading.

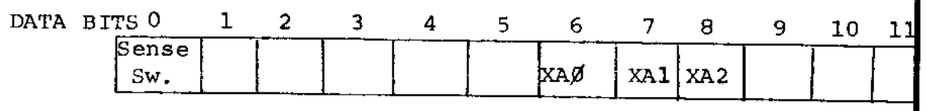
CB3	CB4		Character Display Mode Control Bits
Ø	Ø	Normal	Display the character in bits 5-11 at normal intensity if in visible zone.
Ø	1	Blink	Blink this character at a 1.9 Hz rate (1.6 Hz for 50 Hz systems) if in visible zone.
1	Ø	Bold	Display this character at increased intensity if in visible zone.
1	1	Cursor	Display this character as a cursor if in a visible zone. The character and its dot matrix compliment are displayed alternately at a 3.7 Hz rate (3.1 Hz for 50 Hz systems).

4.6.2 Display, Graphic Data

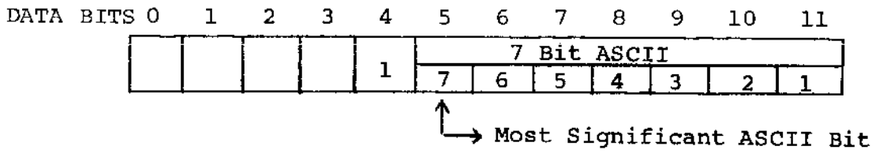
The graphic display field is a dot matrix, 189 dots wide by 200 dots high. Each dot position corresponds to a bit of a data word in the core buffer. The first word of the buffer defines the first 12 dots on the first row. Bit Ø is the first to be displayed, bit 11 the last. If a bit is a 1, a dot will be displayed; if it is a Ø, no dot is displayed. Thus, if the first three words of the buffer were 7070, 5252, 0777, the corresponding display would be

It requires 16 words to define one line of graphic data. The last three bits of the 16th word on a line are not displayed. When in graphic mode there is no way to terminate the buffer short of 3200 words; thus the entire buffer must be defined even if a major portion is blank.

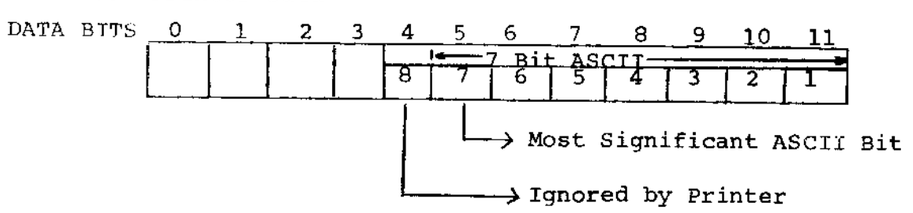
4.6.3 Display, Extended Address Counter and Sense Switch Data



4.6.4 Keyboard Data



4.6.5 Printer Data



4.7 Timing of Signals Available to Programmer

Data read into the AC during the DPMD and DPMS is gated onto the data bus during I/O Pause.

Real time clock flag sets every 16 2/3 ms. (20 ms. for 50 Hz systems). The setting of the flag corresponds to the beginning of the vertical retrace on the display. If the programmer wishes to change between alpha and graphic modes, this must be done within 150 μs. after the real time clock flag sets.

4.8 Operator's Controls

4.8.1 Volume of 'beep' is controlled by R25 on the M8336.

4.8.2 Video Terminal Controls

Horizontal Hold - Stablizes picture in horizontal direction.

Vertical Hold - Stablizes picture in vertical direction.

Brightness - Adjusts intensity of raster.

Contrast - Adjusts contrast.

The above controls are potentiometers located on the right side of the housing.

Power ON/OFF - Applies line power to display module located on auxiliary keyboard.

Sense ON/OFF - The position of this switch is read into AC0 by the DPMS instruction ON = 1, OFF = 0. The meaning of this switch is defined by the programmer.

5.0 Interface Specifications

A composite video signal is available from J1 of the M8336. The signal appears as below.

ENGINEERING SPECIFICATION — CONTINUATION SHEET

TITLE VT8E IN HOUSE ACCEPTANCE PROCEDURE

1.0 SCOPE

1.1 This specification sets forth the procedure for inspection of the VT8E alpha/graphic display terminal and control in accordance with the Workmanship Manual, DEC Standards, ECO's, VT8E specifications and prints. The monitor shall meet the standards set forth in the purchase specifications.

Motorola #3010326

1.2 All units submitted to acceptance must successfully complete the production checkout procedure.

1.3 Any unit which fails any of the requirements of this procedure will be classified as defective and returned to production for rework.

1.4 Units submitted to Acceptance after rework may be recycled through the entire acceptance procedure or any portion thereof at the discretion of the acceptance operator.

1.5 Any unit may be checked for compliance with the engineering specifications at the discretion of Acceptance personnel.

1.6 Approximate Run Time 2½ hours.

1.7 All picture quality shall be matched with the overlay and quality picture

2.0 REQUIRED DOCUMENTS

2.1 VT8E Display Test 1 - MAINDEC-08-DHVTA-A

2.2 VT8E Display Test 2 - MAINDEC-08-DHVTB-A

2.3 LA30 MAINDEC - 8E-D2FB-PB

2.4 VT8E Engineering Specifications

2.5 MAINDEC 8E-D2FB-D

SIZE	CODE	NUMBER	REV
A	AP	VT8-E-6	

3.0 REQUIRED TEST EQUIPMENT

3.1 PDP8/E or PDP8/M

3.2 Checked out LA30A-PA

4.0 ACCEPTANCE PROCEDURE

4.1 Mechanical Inspection

4.1.1 Check unit against construction requisition.

4.1.2 Inspect modules for workmanship.

4.1.3 Check all modules for proper circuit and etch revisions and verify against ECO status sheet and key sheet.

4.1.4 Check for final inspection stamp on all modules including the H851 over the top connectors.

4.1.5 Inspect the H851's for cracks.

4.1.6 Hardware Inspection

4.1.6.1 Check switches for proper mounting and freedom of operation.

4.1.6.2 Check wiring dress, cable and mechanical connections for compliance with hardware. Assemblies Standard (A-SP-7665099-0-0).

4.1.6.2 Insure all mounting screws and bolts are installed through the base plate into casting.

4.1.6.4 Check for high voltage warning signs on the monitor and interlock switch.

4.1.6.5 Insure the unit is clean and free of all foreign material.

4.1.6.6 Insure proper alignment of control knobs.

4.0 ACCEPTANCE PROCEDURE (Continued)

4.1 Mechanical Inspection (Continued)

4.1.6 (Continued)

4.1.6.7 Insure presence of interlock switch insulating shield.

4.1.6.8 Insure proper grounding throughout unit.

4.1.6.9 Check for inspection stamps on the monitor and keyboard if applicable.

4.1.6.10 Insure all crimp connectors are secured properly.

4.1.6.11 Insure the device codes are labeled on the M8335 module.

4.1.6.12 Check to insure all device codes on the M8335 are selected correctly.

NOTE: Due to a lack of off line testing capabilities a close visual inspection of the electrical test section will have to be performed.

4.2 Electrical Test

NOTE: Halt the diagnostic programs with SW Ø=1 only. Do not use the halt switch. Turn one monitor.

4.2.0 Real Time Clock Test

Load the following program into core.

ADDRESS	
ØØØØ	ØØØØ
~~ØØØ1~~	~~131Ø~~
15ØØ	6ØØ2
15Ø1	6Ø56
15Ø2	7ØØØ
15Ø3	72Ø1

4.0 ACCEPTANCE PROCEDURE (Continued)

4.2 Electrical Test (Continued)

4.2.0 Real Time Clock Test (Continued)

ADDRESS

15Ø4	6Ø51
15Ø5	6Ø52
15Ø6	6ØØ1
15Ø7	53Ø6
151Ø	6Ø56
1511	74Ø2
1512	53ØØ

Load and start at address 15ØØ. Using a scope examine inter ROST L at CP1 on the omnibus. This should occur every 16 2/3 ms. A halt at location 1511 indicates the program could not skip on the RTC flag after an interrupt was generated. The M8335 module fails if the interrupts are observed to occur other than every 16 2/3ms or if the error halt occurs.

4.2.1 Load the alpha-numerical diagnostic, VT8E video display Test 1, MAINDEC 08-DHVTA-A using normal binary loading procedures. Program assumes normal IOT's if different use SA70 to change the device codes in the program.

4.2.2 Selected Character Test

4.2.2.1 Load Address ØØ74

Set any character code in SR 5-11. Press clear and continue. Program halts, clear all switches. Set SR 2=1 press continue. A full screen of the character selected will be shown.

4.2.2.2 Turn brightness and contrast controls fully counter-clockwise. Insure that screen is dark.

4.0 ACCEPTANCE PROCEDURE (Continued)

4.2 Electrical Test (Continued)

4.2.2 Selected Character Test (Continued)

4.2.2.3 Turn brightness control fully clockwise. Insure that screen is illuminated.

4.2.2.4 Turn brightness control counter-clockwise until screen just becomes dark. Turn contrast control clockwise until characters are visable.

4.2.2.5 Check the operation of the vertical hold control by turning it all the way clockwise and then counter-clockwise until the picture is distorted then re-adjust.

4.2.2.6 Check the operation of the horizontal hold control by turning it all the way clockwise and counter-clockwise, until the picture is distorted then readjust.

4.2.2.7 Readjust picture to correct image and put SR 2=Ø. Characters should change approximately every second. Run on complete pass through the character codes. Set sense switch on display to OFF.

4.2.3 Run the alpha-numerical diagnostic MAINDEC-08-DHVTA-A. Consult diagnostic listing for switch settings. Run for 2 passes, approximately 40 minutes. After starting, program will halt at address 0264, put sense switch to ON and continue, this checks the condition of the sense switch.

4.2.4 Run Keyboard Test

4.2.4.1 Load SA ØØ72. Start ØØØØ.

4.0 ACCEPTANCE PROCEDURE (Continued)

4.2 Electrical Test (Continued)

4.2.4 Run Keyboard Test

4.2.4.1 The keyboard test has three (3) sections to it and by depressing CR the program goes to the next section or ends the test after Section 3.

4.2.4.2 Section 1. Check lower case operation by typing all the keys on the keyboard. Do not type "CR"

4.2.4.3 Check upper case operation by depressing shift key and typing all the appropriate keys on the keyboard.

4.2.4.4 Type one complete line of any character and count the number of characters. Should be 32 or 64.

4.2.4.5 Depress "CR" for Section 2.

4.2.4.6 Check the cursor right operation by depressing the " → " key and observe the word right on the screen.

4.2.4.7 Check the cursor left operation by depressing the " ← " key and observe the word left on the screen.

4.2.4.8 Check the down cursor operation by depressing the " ↓ " key and observe the word down on the screen.

4.2.4.9 Check cursor up operation by depressing the " ↑ " key and observe the word up on the screen.

4.2.4.10 Depress the home key and observe the word home on the screen.

4.0 ACCEPTANCE PROCEDURE (Continued)

4.2 Electrical Test (Continued)

4.2.4 Run Keyboard Test (Continued)

4.2.4.11 Depress "CR" for Section 3. Depressing a key will show on the screen the ASCII code for the characters and the position of the sense switch. Depressing A shows:

A = 301 SW = 1 (Switch ON)
A = 301 SW = Ø (Switch OFF)

Check all character Codes.

Depress "CR" end of keyboard test. Program will recycle.

4.2.4.12 Check the spot burn protection circuitry of the monitor as the monitor should now be thoroughly warmed up. Turn brightness control full counter clockwise and shut the AC power off while looking at the screen. The raster should collapse to a spot which should not last more than 5 seconds. If the spot burn protection circuitry is faulty, the spot will be very bright lasting much longer than 5 seconds. Readjust brightness control.

4.2.5 Load the graphic test tape (VT8E Video Display Test 2) using normal binary loader procedures.

MAINDEC #08-DHVTB-A

4.2.5.1 Load SA Ø2ØØ with the IF and DF set to the program field. Start with SR 4 = to 60 or 50 cycles and SR6 = to characters per line.

SR4=0 = 60 cycle SR6=0 64 characters
SR4=1 = 50 cycle SR6=1 32 characters

4.0 ACCEPTANCE PROCEDURE (Continued)

4.2 Electrical Test (Continued)

4.2.5 (Continued)

4.2.5.1 Run for 30 minutes.

Ensure visual monitor meets specifications.

4.2.5.2 Check for proper execution of the particular starting addresses. Load address of each test below and follow the switch settings of Section 4.2.5.1.

ØØ72 - Full Screen
ØØ73 - Full Blank Screen
ØØ74 - Checkerboard Pattern
ØØ75 - Vertical Grid Pattern
ØØ76 - Flash a Full Screen of dots followed by a Blank Screen.
ØØ77 - Display alpha with a screen dots

ØlØØ - Display alpha with the vertical grid pattern.

Run each starting address for two (2) minutes.

4.3 Printer Control

Connect known good LA30A-PA to VT8E control. Load printer diagnostic MAINDEC 8E-D2FB-PB using normal binary loading procedures. Run printer tests referencing 8E-D2FB-D diagnostic write-up, The VT8E keyboard is used in place of the LA30 keyboard to run through the diagnostic. No errors are allowed.

4.4 System Acceptance

4.4.1 Run both diagnostics for a minimum of two passes on the VT8E video display test 1 and for a minimum of 30 minutes with VT8E video display test 2.

4.0 ACCEPTANCE PROCEDURE (Continued)

4.4 System Acceptance (Continued)

4.4.2 Run DECX8 Rev. B with the VT8E module. Insure that the system configuration meets the required standards set forth regarding the running of DECX8 on the system.

4.4.3 Run Section 4.3 if applicable.

4.5 Preparation for Shipment and Document Check

4.5.1 Insure the unit is clean and free of any foreign material.

4.5.2 Insure the foam strip, mask and protective screen are installed in the cover.

4.5.3 The cover shall meet finish specifications described in DEC Standard Ø92-ØØ1ØØ.

4.5.4 Install and secure the cover. Insure proper alignment of the keyboard and interlock switch.

4.5.5 Check for accessories in accordance with the accessory check list, drawing number A-AL-VT8E-8.

4.5.6 Check for correct diagnostic tapes and listings, with the Software Accessory Checklist, drawing number A-SL-VT8E-7.

4.5.7 Requirements for customer envelope preparation.

4.5.7.1 Construction Requisition (1 copy)

4.5.7.2 Keysheets (2 copies)

4.5.7.3 Blanket Waiver (if one) (one copy)

4.5.7.4 Waiver (all copies except yellow copy)

4.5.8 Customer Envelope Contents

4.5.8.1 Customer Acceptance Report

4.5.8.2 Keysheet (2 copies)

4.0 ACCEPTANCE PROCEDURE (Continued)

4.5 Preparation for Shipment and Document Check (Con't)

4.5.8 Customer Envelope Contents (Continued)

4.5.8.3 ECO Status Sheets (yellow copy)

4.5.9 T & I Envelope Contents (Continued)

4.5.9.1 ECO Status Sheet (2 copies)

4.5.9.2 Keysheets (3 copies, minimum)

4.5.9.3 Waiver (Yellow copy)

4.5.9.4 Blanket Waiver (1 copy)

4.5.9.5 Acceptance Log and Check Sheets.

ENGINEERING SPECIFICATION CONTINUATION SHEET

TITLE VT8E FIELD INSTALLATION AND ACCEPTANCE PROCEDURE

INSTALLATION

The VT8E Video Display and Control are installed on-site by DEC Field Service personnel. The customer should not attempt to unpack, inspect, install, checkout or service the equipment.

1.0 UNPACKING

The VT8E Display Monitor is packed in a specially designed carton to avoid damage during shipment.

NOTE: Carefully examine the VT8E for damage. Any damage should be reported immediately.

Unpack the VT8E Display Monitor as follows:

1.1 Remove the Display Monitor from the shipping container.

1.2 Remove the polyethylene cover.

1.3 Remove any tape, etc., from the display monitor cabinet.

1.4 Remove the display monitor from the shipping skid.

1.5 Install nylon screws and washers (feet) into the bottom of the display chassis.

1.6 Place the display monitor in the desired location.

2.0 SHIPPING CHECKLIST

A shipping checklist is provided with each VT8E to ensure that the following have been accomplished and/or included:

2.1 Quality Control check.

2.2 Manuals

VT8E Maintenance Manual (Part of PDP8/E, PDP8/F, PDP8/M Maintenance Manual, Volumes 1, 2 and 3).

2.3 Customer Acceptance Procedure

2.4 Interconnecting cable.

2.5 Diagnostic Software.

SIZE	CODE	NUMBER	REV

DEC FORM NO DEC 16-(381)-1022-N370
DRA 108

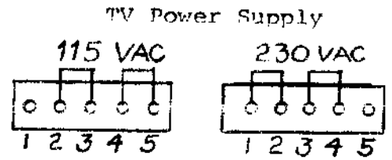
SHEET 2 OF 6

3.0 PRIMARY POWER (AC)

3.1 The VT8E uses a single (permanently connected) AC power cable to connect the site power source to the VT8E Display power supply. The VT8E operates at 100-130 VAC, 50-60 Hz, single phase or 200-260 VAC 50-60 Hz, 1A, single phase.

CAUTION: Before proceding, ensure that the VT05 power transformer windings are correctly connected (for 115V or 230 V operation) to correspond to the installation site power source as shown in Figure 2-1 and drawings D-UA-VT8E-0-0.

Figure 2-1



Sylvania

NOTE: If display monitor is Motorola check TV voltage selection switch on the side of the display chassis. Figure 2-1 does not apply in this case.

Each wire in the power cable is color-coded as shown in Table 2-1.

Table 2-1

POWER CABLE LINE IDENTIFICATION

Pigtail Information		Terminal Strip Nomenclature
Line	Wire Color	
Frame Ground	Green	Frame Ground
Neutral/ Line 2	White	Neutral or Line 2
Line 1	Black	Line 1

3.0 PRIMARY POWER (AC) (Continued)

NOTE: The green wire is the cabinet frame ground and does not carry load current but must be connected for personnel safety. The white wire is the neutral, common, AC return, or cold load and should never be used for VT8E grounding purposes.

The VT8E is normally supplied with a 15A connector. The selected AC service outlet must be capable of at least 2A, 110 VAC, 50 or 60 Hz or 1A, 200 VAC, 50 or 60 Hz single phase.

3.2 Initial Setup

3.2.1 VT8E Power Connections

Use the following procedure for the initial power check of the VT8E:

a) Ensure the main power switch on the right front of the VT8E is off.

b) Meter the wall receptacle to ensure that the hot, neutral, and ground connections conform to the VT8E requirements.

c) Turn main power on to insure display monitor is getting power.

d) Turn off main power.

4.0 MODULE AND I/O INSTALLATION

4.1 I/O Cable Installation

4.1.1 Connect J3 Winchester connector to the mating connector located at the rear of the video display terminal.

4.1.2 Connect J1 cable connector to J1 on the M8336.

4.1.3 Connect J2 cable connector to J1 on the M8335.

4.1.4 If an LA30A-PA or Centronics type line printer or equivalent type printer only device is to be installed connect the printer cable to J2 on the M8335.

4.0 MODULE AND I/O INSTALLATION (Continued)

4.1 I/O Cable Installation

NOTE: Due to space limitations, it is advisable to connect the interconnecting cables to the interface modules before inserting the modules into the omnibus.

4.2 Plug the M8336, M8337, M8335 control modules into the omnibus per the "Recommended Slot Assignment List" in the 8E, 8M, 8F Maintenance Manual Table 2-3, Volume 1. The VT8E is a non-memory option.

4.3 The VT8E modules are plugged into adjacent omnibus slots in this order:

M8336 - First
M8337 - Middle
M8335 - Last

4.4 Install the H851 top connectors between M8336H and M8337H, M8337 E and F and M8335 E and F.

4.5 When installing more then one VT8E control (up to four may be installed in one system) the next control goes into the system directly behind the first. The two controls are interconnected by an H851 top connector located at M8335 J of the first control to M8336 J of the second one.

5.0 CUSTOMER ACCEPTANCE

Customer Acceptance consists of ensuring system operation by running all diagnostic programs provided, running an operating test of the system software, inspecting the shipping checklist, and completing a physical inspection of the VT8E. There should be no physical damage, and the shipping checklist should be complete.

5.1 Customer Acceptance Procedure

Prior to running of customer acceptance, the VT8E should be installed in accordance with the procedure, in Section 1.0 and 4.5.

Enclosed with the VT8E you will find a large envelope containing the following items:

5.0 CUSTOMER ACCEPTANCE (Continued)

5.1 Customer Acceptance Prodedure (Continued)

5.1.1 Customer Acceptance Forms

Upon successful completion of acceptance, the field serviceman must list any exceptions to proper acceptance on this form. The exceptions must include missing items, incomplete shipments or specification conflicts. The customer must sign the Acceptance Form.

5.1.2 Accessory Checklist

This is a list of all items which were shipped with the VT8E and should be used to inventory the shipment. The customer should be present during this inventory. Any missing items should be noted on the Customer Acceptance Form.

Customer Acceptance is a demonstration to the customer, that the VT8E operates according to specification. The demonstration shall consist of operating the appropriate diagnostics in the customers presence.

1. Consult the supplied diagnostic write-ups for proper set-up and operation.

2. Run the diagnostic for one complete pass.

Successful completion of 1 and 2 shall constitute completion of VT8E Customer Acceptance. Discrepancies must be listed on the Customer Acceptance Form, and signed by the customer.

NOTES:

1. MANUFACTURING SHOULD USE MACHINE CRIMPER. TOOL FOR CRIMPING PINS (ITEM NO 4) MUST BE HT66 FROM BERG ELECT.
2. INSULATION AND DRAIN WIRE TO BE CUT BACK AS SHOWN ON DRAWING.
3. FOR CRIMPING OF ITEM #7 (SPLICE) USE HAND TOOL AMP #69241-1
4. USE BRADY MARKERS FOR M8335.
