11 SYSTEMS COURSE

TRAINING DRAWINGS

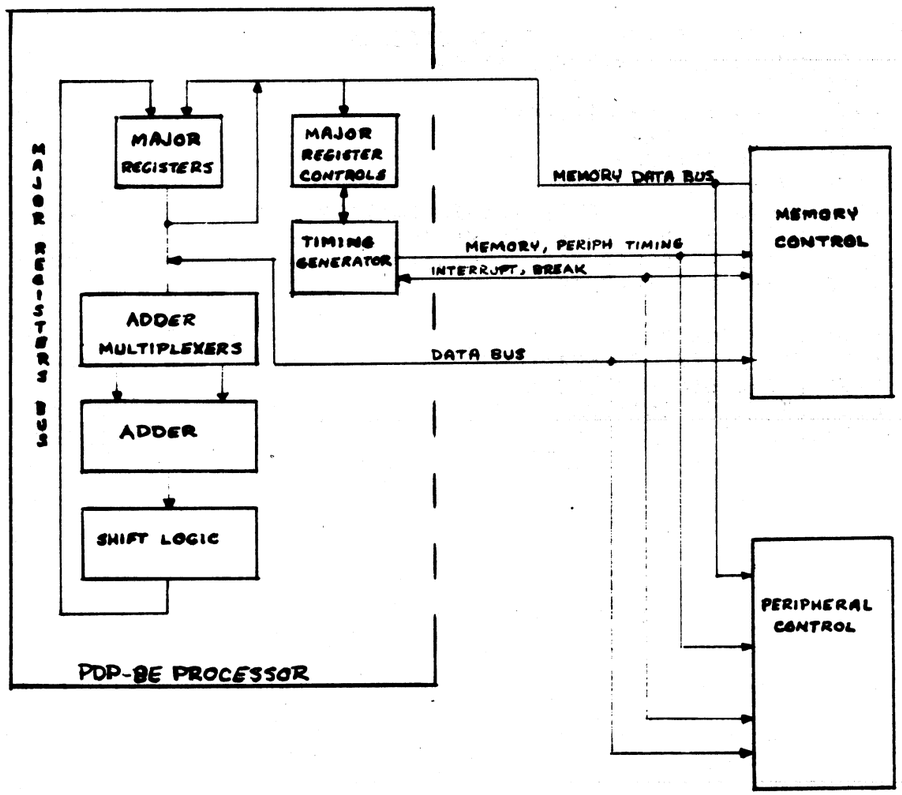

Fig 1. PDP8E CPU/MEMORY/PERIPHERAL BLOCK DIAGRAM

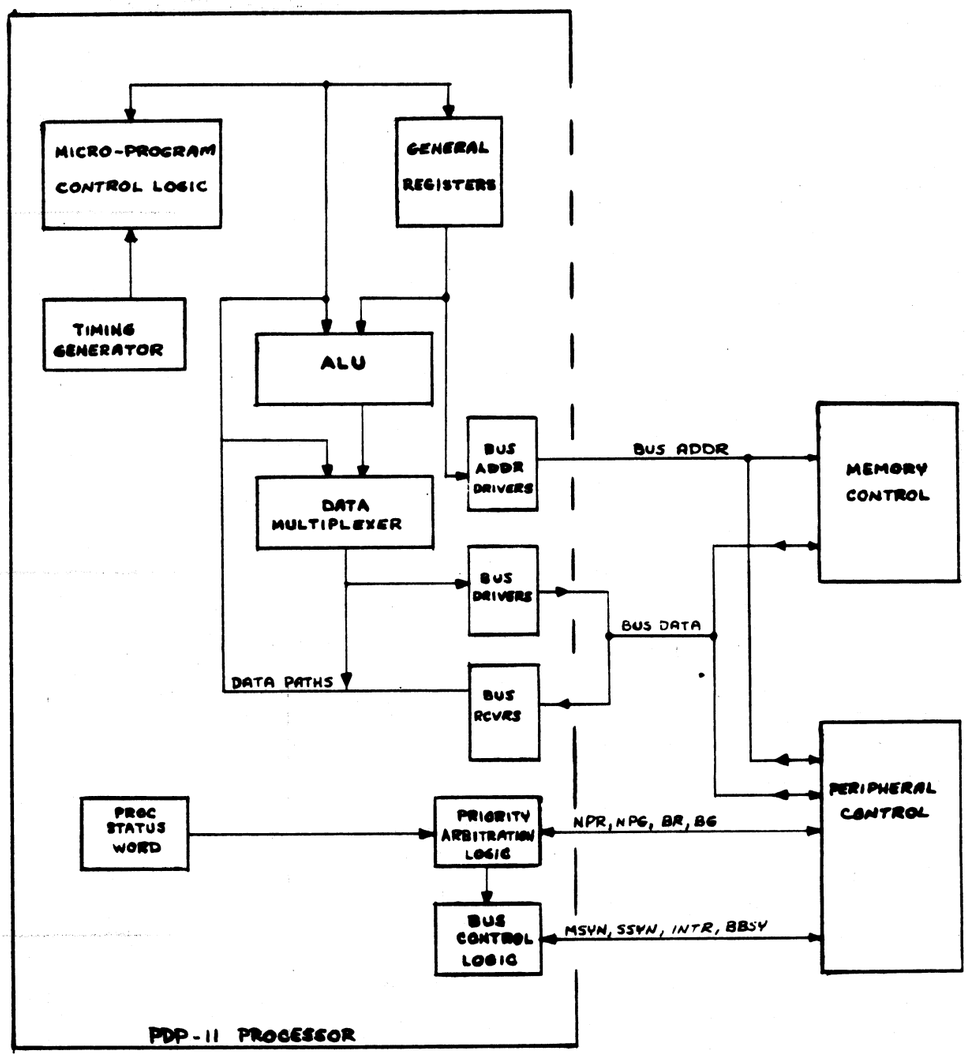

Fig. 2. PDP11 CPU/MEMORY/PERIPHERAL BLOCK DIAGRAM

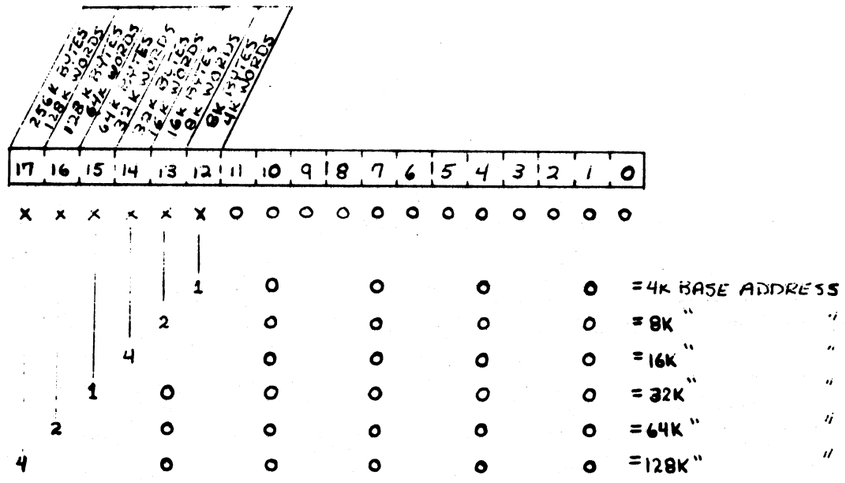

Fig 3. PDP-11 MEMORY ADDRESS INTERPRETATION

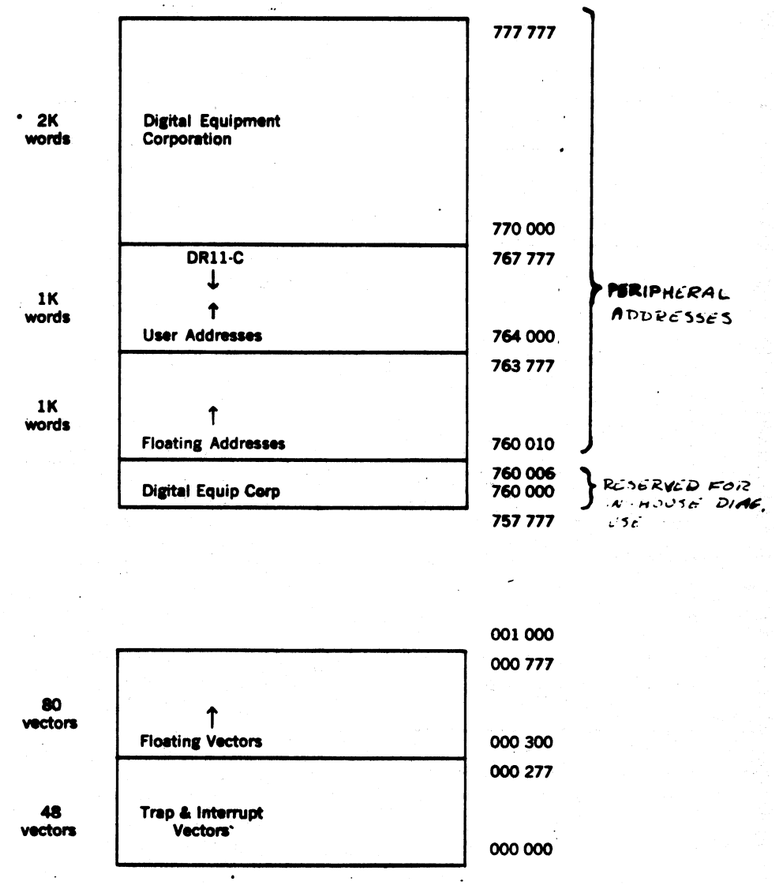

Fig 4 PDP-11 ADDRESS MAP

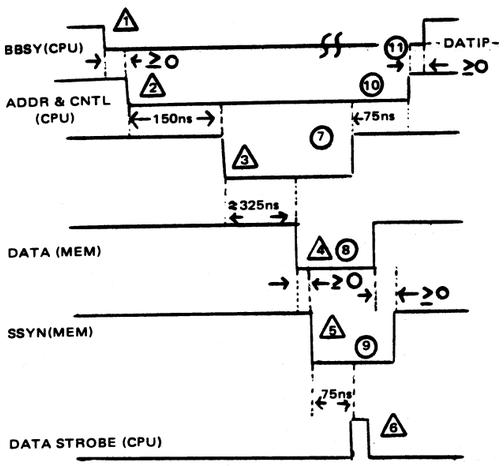


1. CPU asserts BBSY and is now bus master.
(11). CPU drops BBSY, unless this is a DATIP.
2. CPU asserts address and control lines.
(10). CPU drops addr and cntl lines 75ns after dropping MSYN.
3. CPU asserts MSYN after 150ns DESKEW time.
(7) CPU negates MSYN after strobing data into itself.
4. Memory puts data on bus 325ns after decoding addr.
(8) Memory removes data after seeing MSYN drop.
5. Memory asserts SSYN some time after data is put on bus.
(9). Memory negates SSYN after removing data from bus.
6. CPU strobes data into itself 75ns after receiving SSYN. This signal is not on the ubs, shown for explanation purposes only.

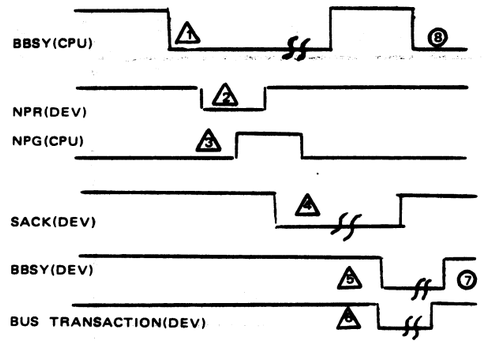
*NOTE: DATIP must be followed by DATO or DATOB cycle.

FIGURE 5 MSYN-SSYN timing for DATI or DATIP transaction: CPU Master, Memory Slave.

1. CPU asserts BBSY and is now bus master
(9) CPU drops BBSY
2. CPU asserts address and control lines.
(8). CPU drops addr and cntl lines 75ns after dropping MSYN.
3. CPU puts data on bus.
4. CPU asserts SSYN after 150ns DESKEW time.
(7). CPU negates MSYN and data after receiving SSYN.
5. Memory strobes data into itself 50ns after MSYN.
6. Memory asserts SSYN after strobing data.

*NOTE: DATO and DATOB transactions are identical except for conditions of control lines.

FIGURE 6 MSYN-SSYN timing for DATO or DATOB transaction: CPU Master, Memory Slave



1. CPU holds BBSY until end of current bus cycle.
(8). CPU asserts BBSY when device drops it.
2. Device requests bus, drops request when granted, and after asserting sack.
3. Arbitration logic sends NPG if no NPG, BG or sack is asserted, drops grant after receipt of sack.
4. Requesting device acknowledges grant, drops sack after it asserts BBSY.
5. Device asserts BBSY when CPU drops it.
(7). Device drops BBSY after transaction is complete.
6. Device initiates DATI or DATO sequence, see Figures 5,6.

FIGURE 7 Priority arbitration timing for non processor request

1. CPU holds BBSY until end of current bus cycle.
(12). CPU asserts BBSY, proceeds to devices service routine.
2. Device requests bus, drops request when granted, and after asserting sack.
3. Arbitration logic sends BGn if no NRG, BG or sack is asserted. Drops grant after receipt of sack.
4. Requesting device acknowledges grant, drops sack after it asserts BBSY.
5. Device asserts BBSY when CPU drops it.
(10). Device drops BBSY, INTR, Vectors after receiving SSYN form CPU.
6. Device asserts INTR when it asserts BBSY.
7. Device puts vector address on data lines when it asserts BBSY.
8. CPU strobes vector address into its internal registers after 75ns DESKEW time.
9. CPU sends SSYN to acknowledge vector transfer.
(11). CPU drops SSYN after device drops INTR.

FIGURE 8 Priority arbitration timing for bus request (Interrupt)

KD11-A PROCESSOR

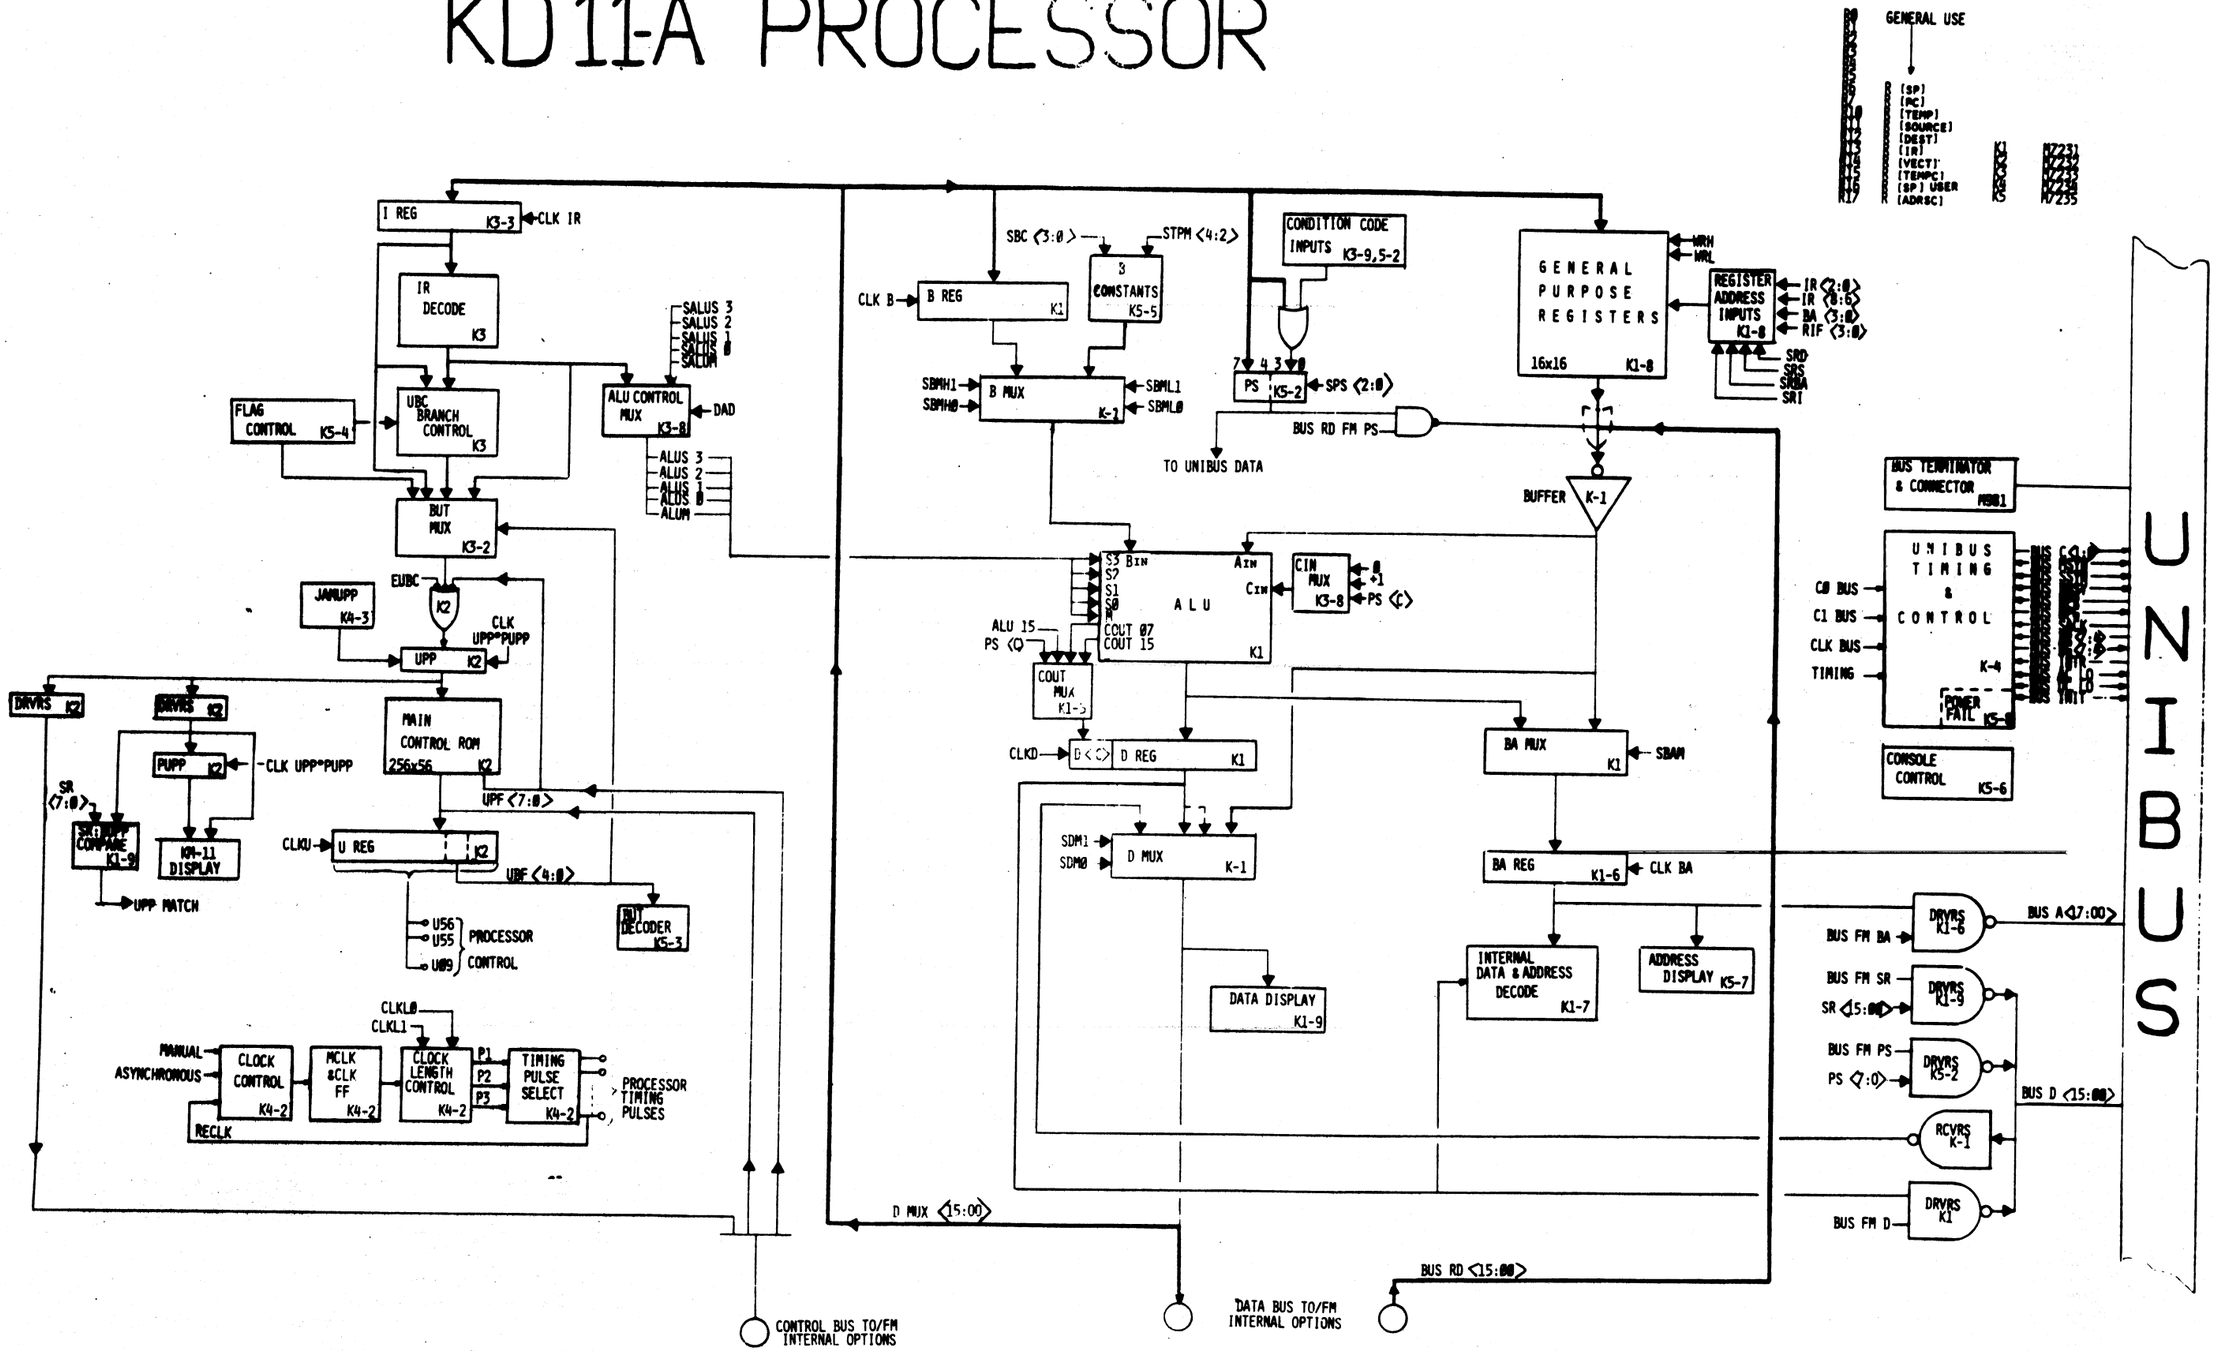


Fig. 10 PDP-11/40 BLOCK DIAGRAM

5 Timing pulses / Rom state

Both general register sets contain = information, can read from different registers depending on SRC & DST, but must write identical data in each set.

11 SYSTEM BLOCK DIAG.
03-08-76 JW

Fig 12. 11 SYSTEM BLOCK DIAGRAM

NOTES:

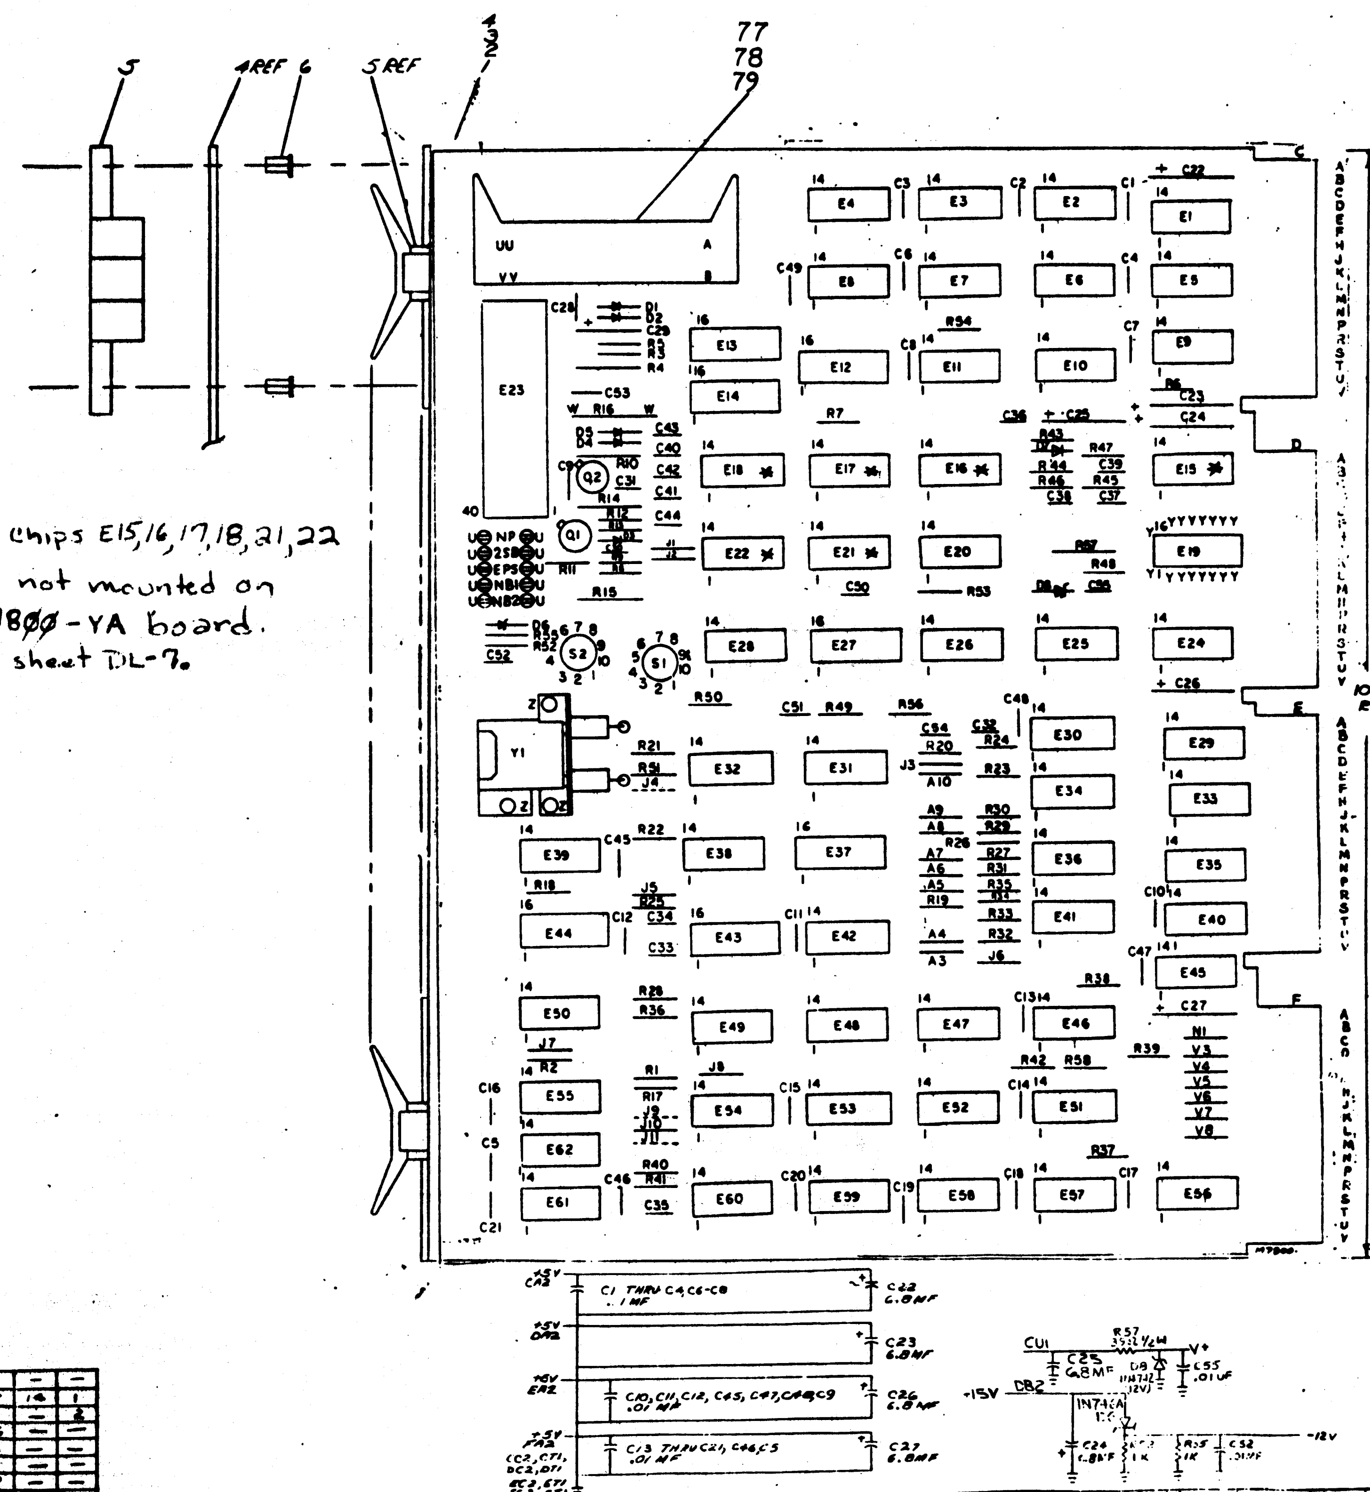
1.) PIN NOTATION THROUGHOUT IS ORDERED UPON MODULE PLACEMENT IN THE SYSTEM UNIT. MODULE REFERENCE ALONE IS OBTAINED BY CONVERTING THE FIRST LETTER ACCORDING TO THE PIN NOMENCLATURE CHART AT THE LEFT.

2.) JUMPERS TO BE USED AT CONNECTIONS A3-A10, J1-J10, V3-V8, AND N1.

3.) LETTERS ENCLOSED IN PARENTHESIS REFER TO PINS ON THE BERG CONNECTOR. EXAMPLE: (X).

4. DEC 8640'S WERE PHASED IN AS DEC 380 REPLACEMENTS. ANY 380 FAILURES SHOULD BE REPLACED BY 8640'S EXCEPT E28. E28 MUST BE REPLACED WITH A 7380.

5. FOR YC VERSION, C36 VALUE IS 1200PF.



* Note: chips E15, 16, 17, 18, 21, 22 are not mounted on M7800-YA board. See sheet DL-7.

SHEET 1 OF 9

ENGINEERING SPECIFICATION [redacted] **CONTINUATION SHEET**

TITLE DL11 INSTALLATION PROCEDURE

DL11 INSTALLATION PROCEDURE:

Installation of the M7800 module or its variation as a DL11-A through DL11-E option consists of the following preparations:

1. Jumper insertion/deletion for selection of operation mode (A, B, C, D, or E).
2. Register address assignment.
3. Vector address assignment.
4. Priority assignment.
5. Special NPR jumper insertion/deletion.
6. Selection of data format (data bits, stop bits, parity).
7. Selection of crystal for baud rate.
8. Installation of G8000 in systems where +15v is not available.
9. Filter capacitor selection for high baud rate current-loop.
A. OPERATION MODE:

The following describes the jumpers associated with controlling the mode of operation (A,B,C,D, or E):

J1. Ties EIA driver to REQUEST-TO-SEND lead (pin 4) of dataset cable. IN for DL11-B,D, and E; does not affect DL11-A and C. Drawing DL-7.

J2. Ties EIA driver, normally used for the REQUEST-TO-SEND lead, to FORCE BUSY lead (pin 25) for use with Bell 103E. This is a customer option. If not specified, jumper is OUT for all DL11's. Drawing DL-7.

J3. When inserted, allows REQUEST-TO-SEND lead (pin 4) to be controlled by bit 2 of the receiver status register. OUT for DL11-B and D; IN for DL11-E; does not affect DL11-A and C. Drawing DL-4.

J4. When inserted, forces "DATA LEADS ONLY" mode of EIA operation. Turns DATA TERMINAL READY (pin 20) and REQUEST-TO-SEND (pin 4) on. IN for DL11-B and D; OUT for DL11-E; does not affect DL11-A and C. Drawing DL-4.

J5. When inserted, allows the BREAK bit to function. OUT for DL11-A and B; IN for DL11-C,D, and E. Drawing DL-4.

J6. When inserted, allows DSET INT to cause interrupts. OUT for DL11-A,B,C and D; IN for DL11-E. Drawing DL-4.

J7. When inserted, allows dataset control bits to be read as part of the receiver status register.

	SIZE	CODE	NUMBER	REV
	A	SP	DL11-0-2	F

DEC FORM NO DEC 16-(381)-1022-N370 DRA 108

SHEET 2 OF 9

J7. (con't)

OUT for DL11-A,B,C and D; IN for DL11-E.
Drawing DL-2.

J8. When inserted, allows error bits to be read as part of the receiver data **register**. OUT for DL11-A and B; IN for DL11-C,D and E.
Drawing DL-2.

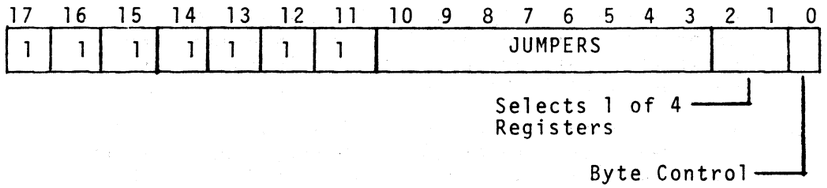
Summary of mode control jumpers:

JUMPER	A	B	C	D	E	DRAWING
J1	*	IN	*	IN	IN	DL-7
J2	OUT	OUT	OUT	OUT	OUT	DL-7
J3	*	OUT	*	OUT	IN	DL-4
J4	*	IN	*	IN	OUT	DL-4
J5	OUT	OUT	IN	IN	IN	DL-4
J6	OUT	OUT	OUT	OUT	IN	DL-4
J7	OUT	OUT	OUT	OUT	IN	DL-2
J8	OUT	OUT	IN	IN	IN	DL-2

*= don't care

B. REGISTER ADDRESS ASSIGNMENTS:

The DL11 can respond to addresses with the following format:



Bits 10 through 3 are controlled by jumpers A1Ø to A3. A jumper inserted indicates a zero.

For the DL11-A and B used as the console device, address 777560 is assigned. For additional units, assign 776XX0, where XX=50 for the first additional unit and XX=67 for the 16th unit.

For the DL11-C,D and E assign address 77XXX0, where XXX=561 for the first line, and XXX=617 for the 31st line. Assign all C's first, then D's, and then E's.

C. VECTOR ADDRESS ASSIGNMENT:

Jumpers V8 through V3 control the interrupt vector. A jumper inserted provides a vector bit of one. Vectors can be produced in the form XXØ and XX4 where XX ranges from ØØ to 77.

For the DL11-A and B used as a console device the vector address is 060/064. For additional units vectors are floating.

For the DL11-C,D, and E vector addresses are floating. Assign all C's first, then D's then E's.

D. PRIORITY ASSIGNMENT:

Interrupt priority is established by inserting a "priority plug" in the socket at 'C location 113. For DL11-A B,C,D and E use level 4, for the [illegible] and [illegible] or level 5-7 as specified by the [illegible] The [illegible] of an option which uses the [illegible].

SUMMARY OF REGISTER, VECTOR AND PRIORITY ASSIGNMENTS:

	ADDRESS	VECTOR	PRIORITY
DL11-A,B	777560		
CONSOLE	777562	[illegible]	
	777564		
	777566		
DL11-A,B	776XXØ		
ADDITIONAL	776XX2	FLOATING	4
UNITS	776XX4		
	776XX6		

Where XX= 50 for line #1
and XX= 67 for line #16

	ADDRESS	VECTOR	PRIORITY
	77XXXØ		
DL11-C,D,E	77XXX2	Floating	4
	77XXX4		
	77XXX6		

Where XXX= 561 for line #1
and XXX= 617 for line #31

E. SPECIAL NPR JUMPER:

Jumper N1, shown on drawing DL-6, controls the response of the interrupt circuit to an NPR request. The jumper should normally be IN, except for 11/20 and 11/15 systems without the KH11 option.

F. SELECTION OF DATA FORMAT:

1. Data Bits

Split lug pairs NB2 and NB1 control the number of data bits in the serial character as follows:

NB2	NB1	# OF DATA BITS
OUT	OUT	8
OUT	IN	7
IN	OUT	6
IN	IN	5

2. Parity

Parity is controlled by split lug pairs NP and EPS as follows:

NP	EPS	PARITY
OUT	OUT	OFF
OUT	IN	OFF
IN	OUT	EVEN
IN	IN	ODD

3. Stop Bits

Split lug pair 2SB and jumpers J9, J10 and J11 control the number of stop bits in the serial character as follows:

2SB	J9	J10	J11	# OF STOP BITS
OUT	OUT	IN	OUT	2
IN	OUT	IN	OUT	1
IN	OUT	OUT	IN	1.5 for TI, GI, and SCM UARTS
IN	IN	OUT	OUT	1.5 for WD UARTS

G. CRYSTAL SELECTION:

The clocking scheme of the DL11 consists of a single crystal oscillator feeding a divider network, with two 10-position switches tapping various points to feed into the UART's

G. Con't

transmitter and receiver sections. Thus, for a given crystal frequency, 8 baud rates are independently selectable for transmit and receive. The two addition switch positions select external clocks.

SPEED GROUP		1	2	3	4
		CRYSTAL (HZ)			
POSITION	FACTOR	844.8K	1.03296M	1.152M	4.608M
1*	23040	36.7	44.8	50	200
2	15360	55	67.3	75	300
3	7680	110	134.5	150	600
4	3840	220	269	300	1200
5	1920	440	538	600	2400
6	960	880	1076	1200	4800
7	640	1320	1614	1800	7200
8	480	1760	2152	2400	9600

*Most counter-clock wise position.

To determine a crystal frequency for a non-standard baud rate, pick the position of the closest baud rate in the 1.152MHz column, and then multiply the non-standard baud rate by the factor for that position. For example, if the customer specifies 1050 baud. this is closest to 1200 baud, position 6.

1050 X 960 = 10080000 = 1.008MHz.

The crystal frequency should not fall outside the range of the standard crystals. Although the above table included only the standard DL11 crystals other values may be specified by the customer or by other documentation of an option which uses the DL11.

DEC part number for the standard crystals are as follows:

844.8 KHz	18-10245-1*
1.03296 MHz	18-05501-6
1.152 MHz	18-05501-5
4.608 MHz	18-05501-7

*Use A or C cut crystals only. Do not use crystals marked NE-6D.

When ordering a special crystal, refer to purchase specification 18-05501 for crystal specification.

Insure that transparent vinyl tape (9008269) is applied to the top surfaces of the crystal and mounting brackets to insulate from adjacent modules.

H. G8000 INSTALLATION:

For DL11-B, D, and E a positive voltage is required between 9 and 15 volts to operate the EIA drivers. For PDP-11/20 and PDP-11/15 systems with the H720 power supply, a G8000 module must be installed to provide this voltage. Using a filter network, this module converts the full-wave rectified "+8V" signal to a positive DC voltage.

1. Install G8000 into slot AØ2 of DD11-A.
2. Wire AØ3V2 to AØ2V2.
3. Wire AØ2N2 to CXXU1 where XX is the slot location of the M7800.

Refer to diagram 1.

I. FILTER CAPACITOR SELECTION:

For DL11-A's and DL11-C's, which operate with 20ma current loops, capacitors are used to filter the receive line and slow the switching time of the transmit line. To avoid excessive distortion above 150 baud, the capacitance in each of these two circuits must be reduced. This is accomplished by clipping C29 (.47 mfd) and C31 (1000 pf), both shown on drawing DL-3.

J. DL11-B,D,E in Systems with +15V available using DD11-A
There is a special situation of using a DD11-A to mount a DL11-B, D, Or E in systems with +15V available. These systems have +15V available and it appears at pin AØ3V2 of the DD11-A when using power harness such as 7009177, 7008855, or 7008909. In this situation, no G8000 is necessary, and +15V can be wired directly from AØ3V2 to CXXU1, where XX is the slot number of the DL11. NOTE: this does not apply to DL11-A or C or DD11-B.

K. When using the DL11-B,D,E in an 11/05 processor pin CXXU1 has +15V available on it so no G8000 or no jumpers are required.

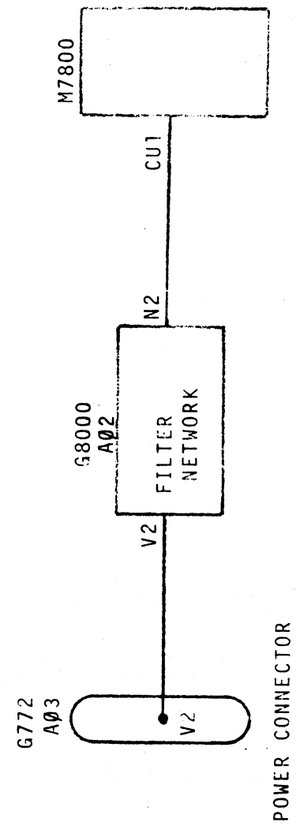


DIAGRAM 1. G8000 INSTALLATION

NOTES:
1.) PIN NOTATION THROUGHOUT IS ORDERED UPON MODULE PLACEMENT IN THE SYSTEM UNIT. MODULE REFERENCE ALONE IS OBTAINED BY CONVERTING THE FIRST LETTER ACCORDING TO THE PIN NOMENCLATURE CHART AT THE LEFT.
2.) JUMPERS TO BE USED AT CONNECTIONS A5-A12, N1, AND V3-V8.
3.) DEC 8640'S WERE PHASED IN AS 380 REPLACEMENTS. ANY 380 FAILURES SHOULD BE REPLACED BY 8640.

NOTE:
1. CUT ETCH SIDE 1 AT E16-6 ONLY WHEN A LP05 WITH VFU IS USED. FOR REWORK INSTRUCTIONS FOR R68 & E19 11,12,13, SEE ECO M7258-00009.
2. J9 ALWAYS IN AND J8 ALWAYS OUT.
3. FOR JUMPER SELECTION, W10 TO BE TREATED AS J9 AND A WIRE FROM E19 PIN 11 TO W10 (AS SHOWN ABOVE)

3. (CONT'D) IS TO BE TREATED AS J8. REFER TO JUMPER TABLE ON COVER SHEET FOR JUMPER SELECTIONS.

NOTES:

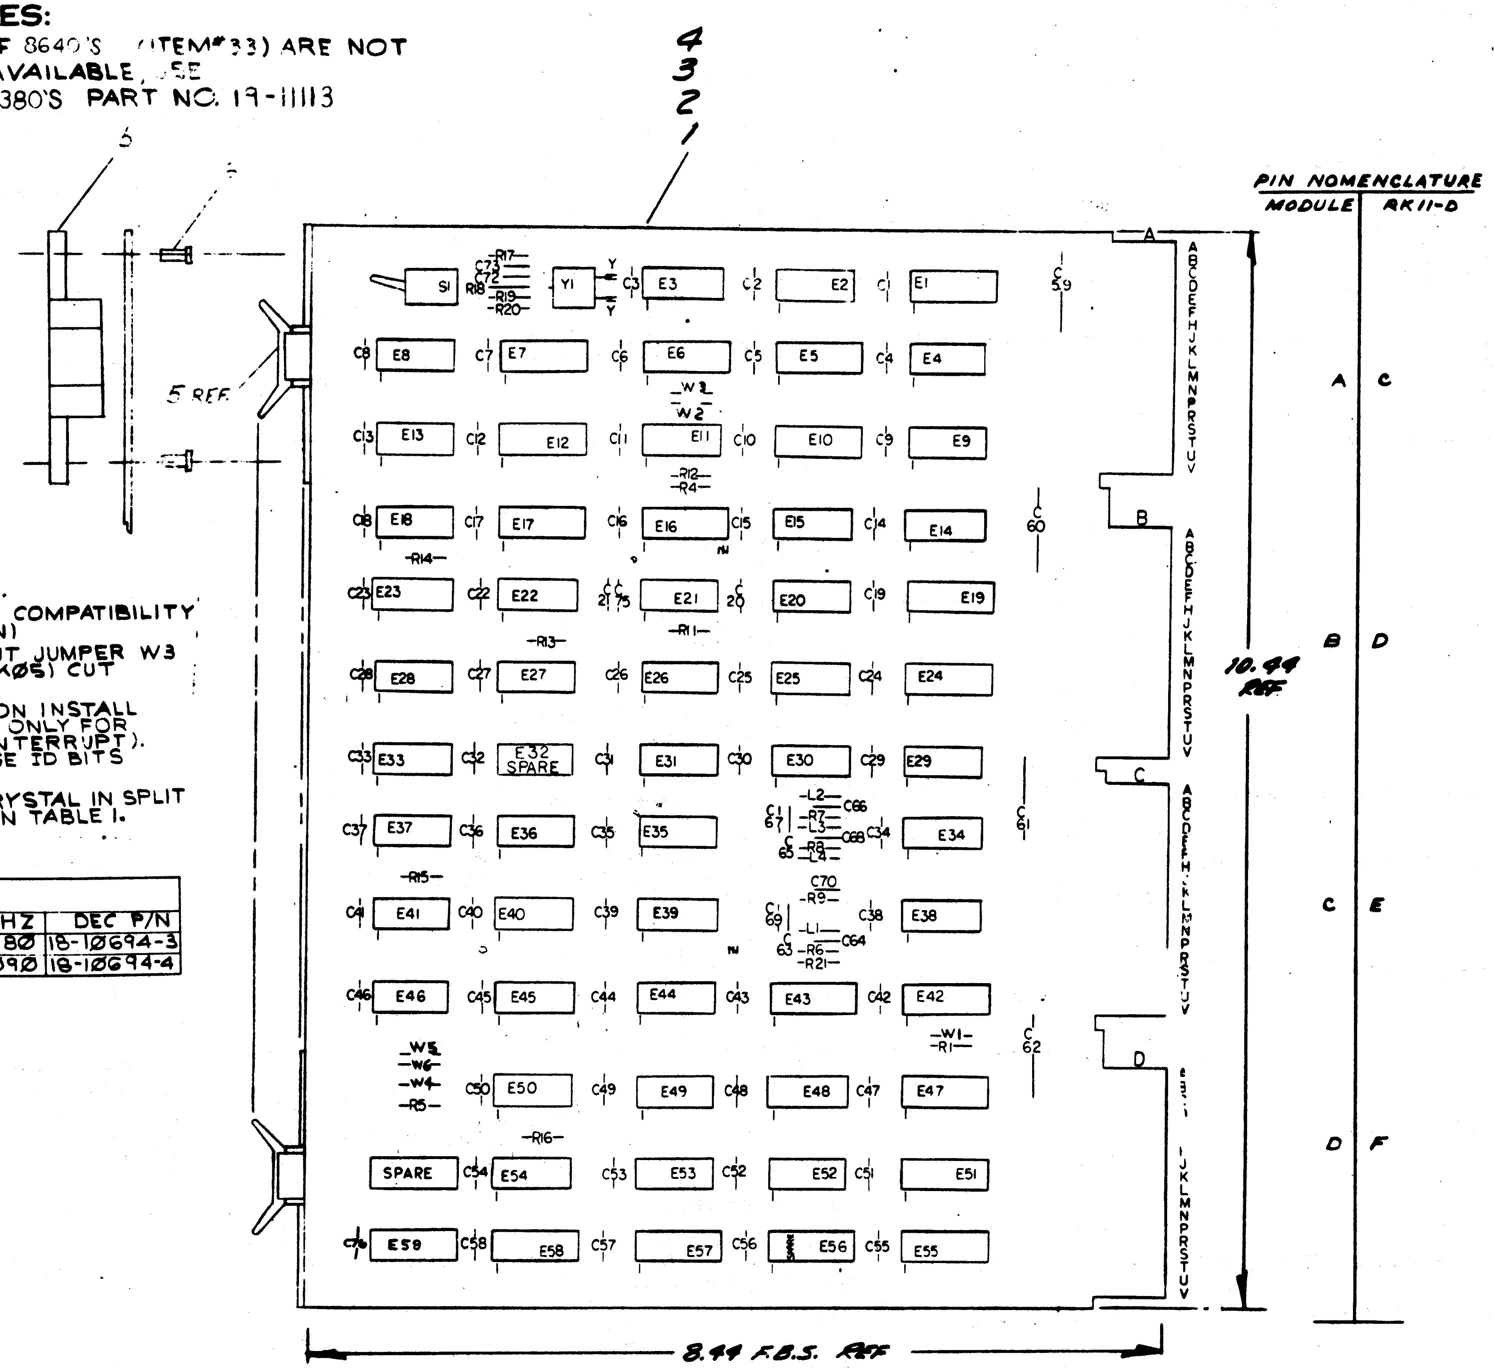
1.) IF 8640'S (ITEM#33) ARE NOT AVAILABLE, USE 11380'S PART NO. 19-11113



NOTES

1.) INSTALL W1 FOR RK05.
2.) CUT W4 FOR RK11-C COMPATIBILITY (NORMAL OPERATION)
3.) FOR RK11-D (RK05) CUT JUMPER W3 FOR RK11-E (18 BIT RK05) CUT JUMPER W2.
4.) FOR NORMAL OPERATION INSTALL W6 (CHANGES ID BITS ONLY FOR SEARCH COMPLETE INTERRUPT). INSTALL W5 TO CHANGE ID BITS FOR ANY INTERRUPT.
5.) INSTALL PROPER CRYSTAL IN SPLIT LUGS AS OUTLINED IN TABLE I.

SET UP UNIBUS TIMING AS FOLLOWS:

1. TIMING ADJUSTMENTS ARE MADE BY REMOVING CAPACITORS C61 THRU C65 AS REQUIRED. WITH C61 THRU C65 [illegible] INSTALLED THE OUTPUT AT [illegible] HAS A PERIOD OF ≈ 88 NSEC. REMOVAL OF EACH CAP DECREASES THIS BY ≈ 5 NSEC.
2. MAKE THE FOLLOWING MEASUREMENT AND ADJUSTMENT WHILE DOING A DISK WRITE.
   a. SYNC EXTERNALLY ON RK NPR MASTER (1) H
   b. MEASURE FROM BUS BBSY L TO BUS MSYN L. DELETE CAPACITORS AS REQUIRED TO MAKE THIS TIME EQUAL TO 150 NSEC MINIMUM.
3. TO VERIFY PROPER TIMING MAKE THE FOLLOWING MEASUREMENTS:
   a. WHILE DOING A DISK WRITE, SYNC EXTERNALLY ON END SYNC (1) H
   b. MEASURE FROM BUS SSYN L TO DATA STR 2 L EQUAL TO 75 NSEC MIN.
   c. MEASURE FROM BUS MSYN L TO Ø → NPR H EQUAL TO 75 NSEC MIN
   d. WHILE DOING A DISK READ, SYNC EXTERNALLY ON END SYNC (1) H
   e. MEASURE FROM BUS MSYN L TO Ø → NPR H EQUAL TO 75 NSEC MIN.
4. IF ANY TIMES MEASURED IN PART 3 ABOVE ARE LESS THAN 75 NSEC ADD ONE 6.8 CAP
5. IF ANY COMPONENT IN THE TIMING CIRCUIT IS REPLACED MEASUREMENTS MUST BE RETAKEN AND CAPACITORS ADDED OR REMOVED AS REQUIRED.

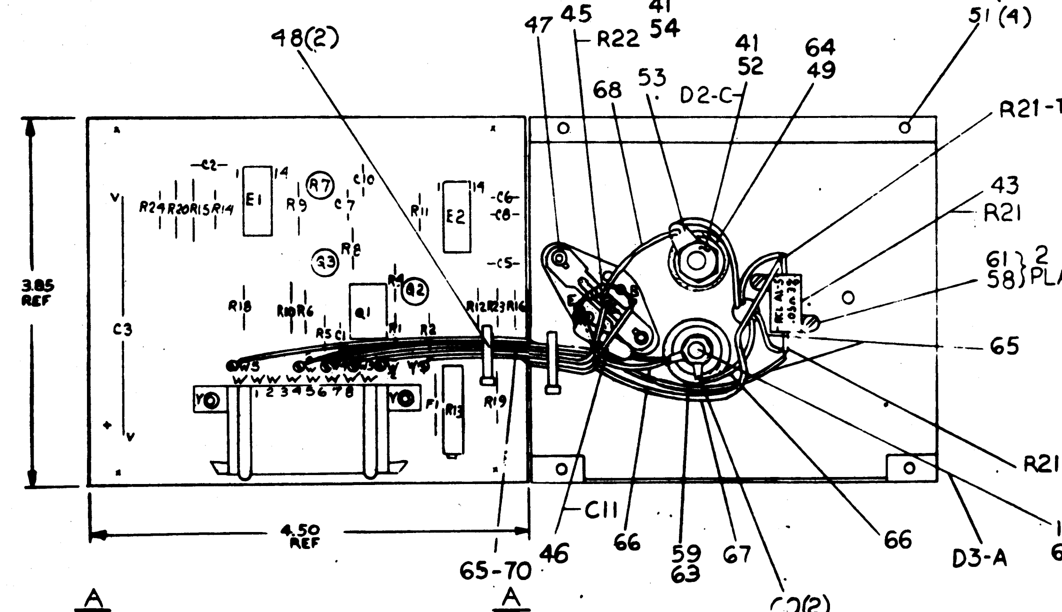
VIEW A-A
SCALE: NONE



NOTES:

1. R13 IS USED FOR OUTPUT VOLTAGE ADJUSTMENT. R7 IS USED FOR OUTPUT CURRENT ADJUSTMENT.
2. CUT LEADS OF RES. (R22) SO THERE IS 3/8" OF A LEAD LEFT ON BOTH ENDS.
3. CUT LEADS OF CAP. (C11) SO THERE IS 1/2" OF A LEAD LEFT ON BOTH ENDS.
4. THERMAL COMPOUND (ITEM 31) IS TO BE APPLIED TO BOTH SIDES OF ALL THERMAL INSULATORS (ITEM 49, 50 & 63). BOTH SIDES OF EACH INSULATOR SHOULD BE COVERED, LEAVING NO VOIDS WHEN INSTALLED. CARE MUST BE EXERCISED SO THAT NO EXTRA COMPOUND INTERFERES WITH ANY ELECTRICAL CONNECTION MADE TO ANY DIVICE.
5. WHEN ASSEMBLING THE WIRES FROM THE CIRCUIT BOARD TO THE HEAT SINK, PLACE THE MODULE AGAINST THE HEAT SINK, WIRE AS SHOWN BY THE WIRE LIST AND MAKE A SERVICE LOOP AT THE CONNECTIONS ON THE HEAT SINK TO TAKE UP ANY EXCESS WIRE THAT MIGHT BE AVAILABLE.
