--	--------------------------------------	---

Pertec is currently shipping all D3000 Single Platter disk drives with the lower platter installed, but without heads. The lower platters are installed to provide a flywheel effect for the purpose of minimizing sector jitter.

Upon recognition that lower platters are in the drives, requests are being made to convert these single platter units to dual platter units.

These conversions should be made only at the factory for the following reasons:

- The lower platters are usually those rejected for one reason or another.
- If a unit happens to have a good platter, no testing has even been done to assure its reliability.
- Warranties will not be extended on those units converted in the field.
