

## WARRANTY COVERAGE AND SERVICING ARRANGEMENTS

```

+++++
+
+ WARRANTY
+
+ U.S. Robotics, Inc. warrants to the original purchaser
+ that it shall either repair or replace (at its option)
+ this product if it should prove defective in material or
+ workmanship under normal operating conditions within 90
+ days from date of original purchase. This warranty is
+ void if the product is modified, tampered with, misused
+ or subjected to abnormal working conditions.
+
+ This warranty stands in lieu of all other warranties
+ either express, implied or statutory.

```

## SERVICING

The basic servicing arrangements available are described below. Full details on all servicing arrangements are provided with product shipment. In all the following cases, U.S. Robotics will pay for one way shipping charges to the customer.

## Annual Maintenance Package

For a fee of \$25.00 per year, U.S. Robotics, Inc. will repair, at no additional charge to the customer, any acoustic coupler, modem or data coupler purchased from U.S. Robotics, Inc. which proves to be defective under normal operating conditions. This arrangement is renewable annually.

Acoustic couplers, modems and data couplers not covered by the Annual Maintenance Package will be serviced on a \$30.00 per repair basis, provided that the product has not been modified by the customer and that it has not been subjected to abnormal operating conditions or abuse, in which case the servicing fee is \$25.00 per hour for labor plus parts costs.

## Express Repair Service

For customers who have established credit with U.S. Robotics, we offer an Express Repair Service. Under this plan, we will ship a replacement modem or data coupler via air freight the same day we are notified of the customer's product failure. The customer must ship the inoperative product to U.S. Robotics within three days of the product failure notification. Under this option, the Annual Maintenance Package fee is \$35.00 and products not covered by the Package will be serviced on a \$40.00 per repair basis.

Fees subject to change without notice after 1978.

WARRANTY COVERAGE AND SERVICE ARRANGEMENTS

## TELEPHONE LINE INTERFACE

### USR-310 ACOUSTIC COUPLER

A standard telephone is the only requirement for interfacing the USR-310 Acoustic Coupler to the public telephone network. After dialing the appropriate telephone number and establishing the communications link, just insert the telephone handset into the rubber cups on top of the USR-310 and you're ready to transmit and receive data. No Data Access Arrangement or other telephone line interface equipment is required.

The USR-320 and USR-330 modems are available in two styles:

### F.C.C. CERTIFIED PACKAGE

Under this configuration, the modem connects to the phone lines via an RJ11C voice Jack. This Jack is the small modular style used by a standard extension phone. The modem will also connect via an RJ41S data Jack, which is the style required by most other modems.

### TELEPHONE COMPANY PROVIDED DAA

Under this configuration, the modem connects to the phone lines via a CBS-1001F Data Access Arrangement (DAA) which can be leased from your telephone company. The leasing fee is approximately \$5.00 per month plus an installation fee of approximately \$65.00. Users considering the leasing option should check with the Data Marketing office of their phone company for details as telephone company prices vary widely across the U.S.
